I think this is the last email I have in response to the FOIA EPA R2 2020 003471.
Do you have any tips or recommendations for how to search for more to make sure I didn't miss anything? Thanks

Hi Lisa,

It was a pleasure to chat with you yesterday. I am including my Co-Project Manager, Julio Vazquez, on this email because he will be able to further assist you with your questions below. I have also included Mike Basile, EPA's Community Involvement Coordinator, who will be able to add you to our email list and assist you with any community related matters. Please see attached the sampling results for the property **non responsive**. The owner of the property is responsible for sharing these records with the buyer. One of the files is a map with approximate sample locations and results for Lead at each depth of the composite sample. There is also a spreadsheet attached with the same information for Lead, in addition to other metals we sampled for. The other metals were not found at levels of concern. EPA also tested for Polychlorinated Biphenyls (PCBs) at this property, which were not detected. Those results are also attached as a spreadsheet. If you have any questions or concerns about the results, please let us know and we can discuss further.

Thank you,

Jackie

Hi Jackie – it was so nice to talk with you yesterday! Thank-you again for all of the information on the “Eighteen Mile Creek Superfund Site” in Lockport, NY. Attached is a copy of the deed that shows the transfer of **non responsive**. This was one of the properties on the list that you provided me the information for. As per our phone conversation, please include me on the email chain for all future updates and information. I have only received the Community Update dated May 2018 that listed the initial 29 properties. You had mentioned on the phone that the

testing was expanded now to include 45 properties. Can you please send me the information on that.

Thank you very much!

Have a nice day

Lisa
